## Belgravia Supreme

The BELGRAVIA SUPREME is a fit-anywhere fan convector and brings style and robust simplicity to heating of indoor environments.

Unobtrusive elegance and trouble-free longevity characterise the Belgravia Supreme. Beneath that lightweight aluminum and steel exterior you'll find efficiency, economy, low maintenance and long term reliability that you expect from the Belgravia family of fan convectors.

## Belgravia Supreme PLUS

The BELGRAVIA SUPREME PLUS offers all the characteristics of the Belgravia Supreme but incorporates a fresh air inlet spigot and motorised damper allowing the unit to provide both space heating and ventilation.

Units can be floor or wall mounted. Wall mounted units have the fresh air inlet spigot in the back plate, floor mounted units have the option of the fresh air being drawn in from below the floor via a plinth which can be ordered with the unit.

## Belgravia Classic

The versatile BELGRAVIA CLASSIC comes with a choice of more than 30 casing styles, giving you enough installation options (wall, ceiling or concealed) and intake/discharge configurations to heat any size or shape room. The Classic's low water-temperature cut-out (fitted as standard) saves you energy and money and a further range of thermostatic controls are available as optional extras. You can install the Belgravia Classic in a single visit, each unit is fully-tested before despatch and, within the casing, there's ample room for pipework connections.

## Belgravia Tilevector

The BELGRAVIA TILEVECTOR gives you the freedom to place a heat source anywhere within a suspended ceiling.

An overhead location is not constrained by fixtures such as doors, windows and sensitive equipment that restricts the location of wall and floor mounted fan convectors.
